

EXPLANATION

Assessment tract types – porphyry/skarn

- High-potential (H) tract with high (D) certainty
- Moderate-potential (M) tract with moderate (C) certainty

- Permissive geology
- Occurrences

Base data

- USGS study area boundary
- Proposed withdrawal areas
- County boundaries

Figure 16. Inset map showing mineral-resource-potential tracts for porphyry-type and porphyry-related type deposits in context of permissive geology and porphyry-deposit occurrences in the central part of the study area for the North-Central Idaho Sagebrush Focal Area.
